Scarcity and Production Possibilities

ECO 120: Global Macroeconomics

ECO 120: Global Macroeconomics Scarcity and Production Possibilities

イロト イヨト イヨト イヨト

臣

- **1** Define what is economics and goals of macroeconomics
- Apply scarcity and production possibilities concepts to...
 - defining economics,
 - describing possibilities and tradeoffs in an economy, and
 - describe how economies and standards of living can grow.

・ロト ・回ト ・ヨト ・ヨト

Reading and Exercises

• Textbook: Introduction to Economics, Module 1

- Textbook: Production possibilities, Module 3
- "Makeshift Cuisinart Makes a Lot Possible in Impoverished Mali" by Roger Thurow, *The Wall Street Journal*, July 26, 2002. **Posted on Canvas**
- Canvas Quiz due Wed 11:59 PM. Multiple-choice, 10 questions, unlimited attempts allowed, only best score counts
- Homework/In-class Exercise due Fri 11:59 PM. We will work together in class on Thursday.

• Economics is the study of the allocation of scarce resources.

- **Resource**: broadly defined as anything that is used in production or is consumed.
- **Scarcity**: a resource is considered scarce when there is not enough to satisfy everyone's wants at a zero price.
- Microeconomics (ECO 110) studies how individual consumers and producers make optimal choices with scarce resources.
- Macroeconomics studies how allocation of scarce resources determines the overall performance of an economy

- Economics is the study of the allocation of scarce resources.

- Macroeconomics studies how allocation of scarce resources determines the overall performance of an economy

- Factors of production: scarce resources that are used in the production of goods.
- Land: any natural resource (such as land, forest, oil) that is used for production.
- Labor: time people spend employed in producing goods, as well as the physical and mental talents of people.
- **Capital**: physically manufactured goods used in the production of other goods and services. Eg. buildings for businesses, factories, machines, computers, dump trucks, etc.
 - The process of producing or purchasing new capital goods is called investment.

• **Human capital**: Skills, knowledge, and mental talents of people used in production of goods and services

- Factors of production: scarce resources that are used in the production of goods.

Production Possibilities Frontier

- Many of the same factors of production can be traded between productions of alternative goods.
- Factors of production are scarce.
- Production possibilities: trade-off when producing two or more different goods.
- Starting assumptions:
 - Full employment and efficient use of all resources
 - Single period in time ightarrow fixed resources and fixed technology
 - Two goods. Not essential, just makes it easy to draw

С	60	10	
D	30	13	
Е	15	14	

イロト イヨト イヨト イヨト

æ

Why the tradeoff? Factors of production are scarce!

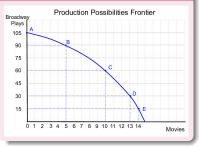

To produce more movies, move workers, building space, set designs, etc. away from making plays to make movies instead

Model Opportunity cost Shifts in PPFs

Relationship between PPFs and Opportunity Costs 10/14

Relationship

- The absolute value of the slope of the PPF = opportunity cost of good on horizontal axis
- Bowed-out shape (steeper slope as x increases) \rightarrow increasing opportunity cost

Law of Increasing Opportunity Costs

- As production of one good increases, the opportunity cost of producing that good increases
- It holds for **both the x-variable good and the y-variable good**.

イロト イヨト イヨト イヨト

Relationship between PPFs and Opportunity Costs 10/14

Relationship

- The absolute value of the slope of the PPF = opportunity cost of good on horizontal axis
